

SOCIETY & EDUCATION  
**IPAR**  
INTERNATIONAL PLASTIC  
AESTHETIC RESIDENCE

Dear Mr. Mrs.

We would like to take this opportunity to introduce our Educational & Scientific project IPAR (International Plastic Aesthetic Residence) which started almost 10 years ago with the aim of providing face-to-face relationships with to medical practitioners. In fact, IPAR welcomes every association, educational center, medical group, congress, commercial company, laboratory, researcher and medical practitioner to set up and bring life to any project or to release any idea together.

During these years, more than 2.000 practitioners worldwide have already followed our programs and have learned new medical practice in aesthetic medicine, dermatology and plastic surgery. We have also established relationships with well-known aesthetic societies and key opinion leaders, who have participated to E2E (experts to experts) programs where they could exchange their experience each other.

4 years ago IPAR became a strong partner of the International Training "Peelings and Injections", annual master training organized by Skin Tech Pharma Group. This program has focused on skin conditions as part of a global anti-aging concept, as well as on the treatments using different depths of chemical peelings combined with botulinum toxin, fillers, lasers, soft dermal injections, mesotherapy and other cutting-edge technologies.

During these years of course organization with aesthetic medicine practitioners, and through its effort and enthusiasm, IPAR has developed new technics such as Pixel Peel, Abrasive Protocol for skin flaccidity and acne scars, specially designed treatment protocol for stretch marks, Slim Face, among others. Especially, Hyaluronic Acid associated with Threads, Full Face Rejuvenation as combined protocols for face rejuvenation with medical concept, and 3D lifting through Phenol Peel are now well established techniques which have been presented during IPAR courses and are now in daily use by worldwide experts. The new IPAR Education Center which opened in Spain in 2017, is offering a new status to IPAR, allowing it to accept up to 50 participants and to organize not only master courses with live demonstrations, but also the visit to the manufacturing site of Medical Devices and Cosmetics, brain storming with scientific specialists, and interactive practice of formulation in a real R&D laboratory.

In this new era for IPAR, we really trust IPAR to provide real support to medical practitioners and their continuing education which will impact on their professional development as well as their business career. We hope you will join this partnership, as we believe that it is an excellent opportunity to be part of a strong international scientific board comprising elite medical practitioners.
